

## Fire update: Addressable Reflective Beam Detectors (Aritech and Ziton)

Dear Customer,

This notice serves as a reminder to all our Aritech and Ziton customers.

### Affected products

Product code	Product description	
FD2705R	Addressable Optical Detector (Polar White)	
FD2710R	Addressable Optical Detector (Polar White)	
1108010	2000 Series Analogue Addressable Reflective Beam Detector - 50 m	
1109010	2000 Series Analogue Addressable Reflective Beam Detector - 100 m	

EN54-12: Fire detection and fire alarm systems. Smoke detectors. Line detectors using an optical beam. As of the 8th of April 2019 a new revision of this standard is in effect. This harmonised standard is mandatory for continued sales in the EU for all beam detectors manufactured after this date.

Unfortunately there were some challenges during the recertification process of our Aritech and Ziton addressable beams, resulting in a delay in the delivery of the new certificates. As a result we will not be able to supply these beams after our existing stock is depleted. We are expected to run out of stock before the end of April. We are currently working with our supplier to resolve the issues as quickly as possible and get these products back on-line as soon as we can.

### Intermediate actions:

As long as we have addressable beam detectors in stock, these can be used without exception. Our stock items are manufactured before the implementation date of the new standard and are properly certified to the old standard.

After depletion of existing stock and until we have the new certificates in hand (expected within the next 3 months), we recommend that our customers use our existing ranges of conventional beams as alternative, together with a suitable addressable interface unit and power supply.

The following conventional beams are available as alternatives:

Product code	Product description	
FD310	End-to-end beam detector - 5 to 120m	
FD705RVDS	Reflective beam detector - low current – 50 m VdS approved	
FD710RVDS	Reflective beam detector - low current - 100m VdS approved	

FD805R-N	Auto aligning reflective beam detector - 50m (support up to 2 heads)	
FD810R-N	Auto aligning reflective beam detector - 100m (support up to 2 heads)	

Notifications will follow as soon as the new certification is available.

Should you need more information, please do not hesitate to contact your [Account Manager](#).

Best regards,
