Mounting Plate for EA-MCP And EA-IO Units

Summary

This powder coated plate is customised to allow both the EA-MCP and the various EA-IO units to flush mount on the wall. The plates is oversized compared to South African 4x4 boxes which allows the plate to be fitted squarely over 4x2 or 4x4 boxes even if these boxes are not mounted squarely.

The plate is made of 2mm mild steel and is very rigid providing a robust and professional installation. The plate ships with fixings for masonry walls along with white screw covers. With countersunk holes the finished result is very clean.

The Modules are attached to the plate using supplied M4 screws ensuring everything that is needed is in the pack. The M4 screws also mean that the unit is very secure on the plate.

Key Points

- Strong 2mm Mild Steel.
- White Powder Coated for long lasting finish.
- Oversized to overcome poorly fitted back boxes.
- All fixings included.
- No need for back box.
- Results in MCP being lower profile on the wall.

Technical Specification	
Finish	Powder Coat White
