

Addressable Handheld Programmer

Summary

The handheld programmer is a versatile tool, compatible with the EA loop devices and panel. Loop devices are soft addressed from 1 to 324 using the programmer and one of the many cable interfaces included. In addition to read and writing the address the tool can also be used to change mode and device settings.

Extra features of the programmer enable individual device testing and identification. It is a loop diagnostics tool, to verify devices and electrical properties of the loop, enabling enhanced installation, commissioning and servicing.

Key Points

- Addresses devices 1-324
- Individual Point Test
- Individual Sounder Test
- IO Test
- Full Loop Diagnostics
- Rechargeable via Type C
- Auto Power Off

Technical Specification	
Operating Voltage	5Vdc
Output Capacity	200mA; pulse 500mA @50ms
Programming Method	Electronically Addressed
Code Range	One address within 1~324
Operating Temperature	-20°C ~ 60°C
Relative Humidity	5% ~ 95%
Dimensions (LXWXH)	155x65x27mm
Weight	148g
