

# Conventional Universal Base

## Summary

The conventional base is a universal base for all EC range of detectors. It allows easy replacement of detectors without the need to change wiring. By removing the device from the base a open circuit fault is created indicating a missing device.

The base provides dedicated terminals for field wiring and optional remote LED's and for end of line resistors.

## Key Points

- Universal Base for all EC detectors
- Fits standard conduit boxes
- Provides wiring for both Detectors and Remote LED

| Technical Specification |         |
|-------------------------|---------|
| Diameter                | 99.45mm |
| Height                  | 15mm    |
